

LUng **C**ancer-related risk factors and their **I**mpact **A**ssessment

WHO?

The LUCIA project is a Horizon Europe funded project aiming to advance lung cancer screening and prevention by discovering and understanding new risk factors contributing to lung cancer.

4 Medical Centers

9 countries

WHAT?

Our work aims to validate risk factors beyond smoking history in lung cancer development and to enable proactive, precision lung cancer prevention. To do this, we develop AI-supported screening tools and non-invasive sensors to detect lung-cancer risk signatures, supporting earlier diagnosis and evidence-based screening policies.

CONNECT WITH US!

We are looking to strengthen and create connections with relevant European research and clinical infrastructures and initiatives, as well as potential partners who can support uptake and exploitation of LUCIA's AI-based and non-invasive screening technologies.

OUR PARTNERS

Join the fight against lung cancer!
